

**IN THE CLAIMS:**

*This listing of claims will replace all prior versions and listings of claims in the application*

**Listing of Claims:**

*Claims 1-7 (Cancelled)*

8. (New) A resin composition comprising at least one resin component selected from a biodegradable resin and a plant-based resin, and a flame retardancy-imparting component.
9. (New) The resin composition according to claim 8, which comprises, as the resin component, at least one resin of polylactic acid, a lactic acid copolymer and polybutylene succinate.
10. (New) The resin composition according to claim 8, wherein the flame retardancy-imparting component is at least one flame retardant selected from a halogen-based flame retardant, a phosphorous-based flame retardant, an inorganic flame retardant and a silicone-based flame retardant.
11. (New) The resin composition according to claim 8, wherein the flame retardancy-imparting component is acetylacetonatoiron.
12. (New) The resin composition according to claim 8, wherein the flame retardancy-imparting component is acetylacetonatocopper.
13. (New) A molded body formed from a resin composition comprising at least one resin component selected from a biodegradable resin and a plant-based resin, and a flame retardancy-imparting component.
14. (New) A method for producing a resin composition which comprises kneading at least one resin component selected from a biodegradable resin and a plant-based resin, and a flame retardancy-imparting component.

15. (New) A method for molding a resin composition wherein a resin composition which is produced by a method comprising kneading at least one resin component selected from a biodegradable resin and a plant-based resin, and a flame retardancy-imparting component is molded by an injection molding method or a compression molding method.
